

# System Power Management

- **Application** : Aviation ground heating equipment
- **PSU/Model** : SHP-10K-230\*5pcs
- **System Voltage** : 175VDC
- **Control Interface** : Analog signal

# System Power Management

- **Application description:**

Aviation ground power supply voltage is basically 36~270V. This case uses 175VDC voltage. PSU is mainly used to power the heating wires in the aircraft ground heating equipment. It support the safe operation of aircraft after landing and before taking off again, and is typically used for aircraft mobility, ground power operations, and cargo and passenger loading.
